Compute the maximum delay allowed for task a7 without affecting the duration of the entire project.

Consider the different paths that link the activity E (5 in the new numbering) with the critical path.

Suppose activity E is delayed x days. The two previous paths must satisfy:

$$\left. \begin{array}{l} u_5 + 5 + x \leq u_6 \\ u_5 + 5 + 11 + x \leq u_9 \end{array} \right\} \begin{array}{l} 11 + x \leq 14 \\ 22 + x \leq 24 \end{array} \left\{ \begin{array}{l} x \leq 3 \\ x \leq 2 \end{array} \right\} \rightarrow \boxed{x \leq 2}$$

Maximum delay allowed for activity E: 2 days
